

Bridging Through Ten

Adding across the ten

Split the second number so you land on ten first, then finish the jump.

$8 + 5 = \square$

$5 = \square + \square$

$8 + \square = 10$

$10 + \square = \square$

$7 + 6 = \square$

$6 = \square + \square$

$7 + \square = 10$

$10 + \square = \square$

$9 + 4 = \square$

$4 = \square + \square$

$9 + \square = 10$

$10 + \square = \square$

$6 + 8 = \square$

$8 = \square + \square$

$6 + \square = 10$

$10 + \square = \square$

Bridging Through Ten

Subtracting across the ten

Split the second number so you land on ten first, then finish the jump.

$$13 - 5 = \square$$

$$5 = \square + \square$$

$$13 - \square = 10$$

$$10 - \square = \square$$

$$15 - 7 = \square$$

$$7 = \square + \square$$

$$15 - \square = 10$$

$$10 - \square = \square$$

$$12 - 6 = \square$$

$$6 = \square + \square$$

$$12 - \square = 10$$

$$10 - \square = \square$$

$$16 - 8 = \square$$

$$8 = \square + \square$$

$$16 - \square = 10$$

$$10 - \square = \square$$
